Skill Sheet

CO Oximetry – EMT - Paramedic

Skill	Pass	Needs Improvement (Please comment)
1. Establishes that the scene is safe (safe working environment OUTSIDE of any potential CO exposure)		
2. Ensures that the patient is removed safely from the CO exposure environment		
3. Demonstrates the assessment for any life threatening condition(s) and treats appropriately		
4. Performs a complete secondary exam		
5. Identifies the signs/symptoms of CO poisoning 6. Initiates high-flow oxygen therapy 7. Properly places CO Oximeter and obtains reading using AT LEAST two different sites/fingers. 8. Initiates any additional therapies needed (IV, medications, etc.) 9. Recognizes the need for transport and adequately articulates that need to the patient		
Total Steps Passed		
Minimum steps needed to pass (assuming no critical fails below)		

Critical Criteria (Automatic Fail)

- _____ Establishes patient care in an unsafe environment (does not recognize the need to move and treat the patient in a safe working environment)
- _____ Does not administer oxygen
- _____ Does not identify signs/symptoms of CO poisoning
- _____ Does not verify CO Oximeter reading at additional sites/alternate fingers
- _____ Does not explain the need for evaluation at a hospital facility
